COLZA

NODARI CS ^{H*}

Winter rape « 00 » restored hybrid

2009 registered

Early, heavy, productive and rich in oil content

Features

IMPLANTATION

Quick in good conditions

ELONGATION SUSCEPTIBILITY

Middle to low

EARLINESS

Early spring growth ½ **Early**
Flowering **Early to**

Maturity **Mid-early**

SIZE Medium

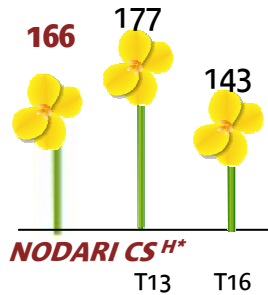

DISEASES

Phoma/stem canker **Resistant**
Light leaf spo Light susceptible
Sclerotinia Light susceptible
Lodging **Resistant**

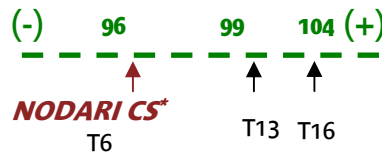

TECHNOLOGICAL QUALITIES

Oil **High**
Proteins **High**
Glucosinolates **Low**

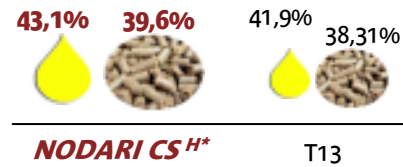

Size

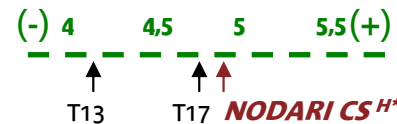

Flowering (in days)

Multi-annual results in France 2007-2008

Varieties	Grain yield 11% standard		Oil content 11% standard		Oil yield		Glucosinolates 2008 Content in μ mol/g
	2007	2008	2007	2008	2007	2008	
Years	q/ha		%		q/ha		
Trial number	6	17	6	17	6	8	17
T 6	-	28,92	-	43,2		12,49	8,57
T 13	35,4	32,05	44,1	41,9	15,61	13,42	15,16
T 16	-	27,14	-	41,4		11,23	16,05
T 17	36,70	32,43	44,8	43,4	16,44	14,07	13,16
NODARI CS ^{H*}	36,22	32,87	44,4	43,1	16,08	14,16	9,51

NODARI CS ^{H*} is the hybrid with a ideal earliness at maturity : it is easy to harvest with less humidity than in controls.

Crop areas and sowing dates

Crop advices

Soil preparation :

Doing a stubble ploughing just after last crop to destroy crop remains. Remove weeds and aftermath and keep a good soil structure.

Sowing density: according to 20 to 25 plants/m² at the end of winter. To limit elongation before winter, you don't have to sow an important plants number on the row.

Les renseignements fournis dans ce document ne sont donnés qu'à titre indicatif et peuvent varier en fonction des conditions agronomiques et climatiques, ainsi que des techniques culturales. La résistance aux maladies concerne les maladies ou souches actuellement connues en France.
